Objective

I'm drawn to problems where software and AI intersect — the kind where you can build something that genuinely removes friction for real users. Eager to contribute to a team where that's the everyday mission.

Education

VNRVJIET

Bachelor of Technology in Information Technology

Sep. 2023 – Present

Hyderabad, Telangana

CGPA: 9.12/10.0

Technical Skills

Languages	JavaScript, Python, Java, SQL
Frameworks	React.js, Next.js, Node.js, Express.js, TypeScript, REST APIs, Tailwind CSS
Database & Tools	MongoDB, MySQL, Vercel, Git, GitHub, VS Code, Postman, Linux
AI & Agents	LangChain, LangGraph, LLM Integration, RAG
Coursework	Data Structures & Algorithms, OOPS, DBMS, OS, Computer Networks

Experience

Full Stack Development Intern

August 2025 – December 2025

Ikipendence

Hyderabad, Telangana

- Contributed to Ikipendence's live production website alongside the core team — implemented UI components and resolved bugs in an active codebase serving real users, adapting to existing architecture with minimal ramp-up time.
- Co-developed Staniya, a community platform where users share and discover geo-tagged cultural stories across Indian states — jointly built the auth system, real-time notifications, media uploads, and bilingual (EN/HI) support end-to-end.
- Integrated an ML-powered state classifier into Staniya using a TF-IDF + Multinomial Naive Bayes pipeline (scikit-learn) trained on story text, automatically predicting the Indian state category for new submissions and reducing manual tagging overhead.

Open Source Contributor

October 2025

Hacktoberfest

Remote

- Repeatedly onboarded to unfamiliar codebases across 9 open-source repositories — diagnosed root causes of reported bugs and delivered clean targeted fixes independently without disrupting existing functionality.
- All contributions accepted by maintainers across diverse tech stacks and project structures during Hacktoberfest 2025.

Projects

ResolveIQ [View Project](#) | *Python, Gemini API, RAG, BGE Embeddings, Pydantic, Streamlit*

May 2026

- Built a RAG-based support triage agent that classifies and auto-resolves customer tickets across three product domains — using BGE embeddings over a 774-file knowledge base (6,632 chunks) with company-scoped cosine retrieval, achieving 100% accuracy on status and request-type classification.
- Implemented a deterministic safety gate and structured Gemini JSON pipeline with Pydantic schema validation and fail-safe escalation; entire system requires at most 2 LLM calls per ticket with sub-100ms retrieval on CPU.

Growth Automation [View Project](#) | *Next.js, TypeScript, Supabase, Gemini API, Tailwind CSS*

May 2026

- Built a B2B lead pipeline that scrapes Reddit and Hacker News every 6 hours via Vercel Cron, filters posts against user-defined ICPs in Supabase Postgres, and scores buying intent 1–10 using Gemini 2.0 Flash.
- Auto-drafts personalized outreach per lead using Gemini and tracks pipeline state on a real-time dashboard built with Next.js App Router and Supabase.

IoT Network Anomaly Detection [View Project](#) | *Python, scikit-learn, Random Forest, Isolation Forest*

May 2026

- Built a 3-stage ML pipeline on CIC-IoT-2022 using Random Forest to classify device category and exact device model from 16 network flow features augmented with 3 engineered features.
- Applied Isolation Forest in Stage 3 to detect behavioral anomalies per device; all models serialized via pickle and served through a modular IoT*Predictor* interface returning category, identity, and anomaly status.

Student Progress Management System [View Project](#) | *React, Node.js, Express, MongoDB, Nodemailer, Cron.js, Tailwind*

March 2025

- Built an admin dashboard that syncs live Codeforces data via scheduled cron to MongoDB Atlas, rendering per-student rating trends, difficulty heatmaps, and solve history, with automated inactivity email reminders via Nodemailer and bulk CSV export.

Achievements

- Ranked **390th globally** in HackerRank Orchestrate 2026, a competitive AI Agent innovation challenge. [View Credential](#)
- Ranked **Diamond** on SmartInterviews — top-tier recognition in DSA. [View Credential](#)
- Competed in **HackWithAI 2026**, a national 24-hour AI hackathon at KLH Bachupally. [View Credential](#)
- Showcased project at **IASF 2026**, a national AI conference hosted at GITAM University.
- Google Solution Challenge 2026 — Defined evaluation metrics and analyzed AI model outputs.

Certifications

- IBM SkillsBuild** – Introduction to Generative AI | **Be10x AI Tools Workshop** – Hands-on AI tools | **Cisco JavaScript Essentials 1 and 2** | **Postman API Fundamentals Student Expert**– Postman
